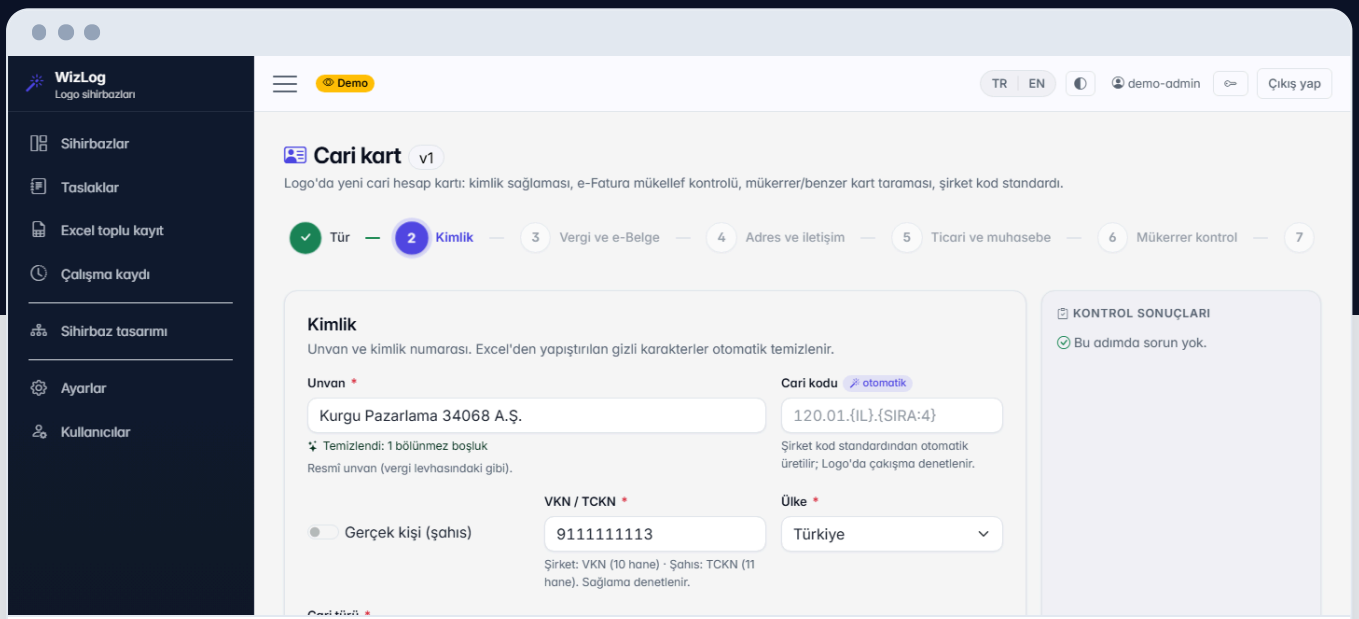
WizLog — Data-Entry Wizards for Logo

The right record in Logo — by hand or by robot

WizLog offers wizards that open customer and stock cards to your company standard, robots that run on schedule and bulk invoicing from waybills; every action is previewed, dry-run and can be undone.



Customer card wizard: identity step and check results

Highlights

Customer card wizard

Domestic, foreign, individual and supplier templates; tax-ID checksum, e-invoice registration, foreign tax number, city and tax office from Logo, risk-limit approval.

Stock card wizard

Merchandise, raw material, semi-finished and finished goods; unit sets, current VAT, serial/lot tracking, EAN-13 barcode checksum and variant matrix.

Excel bulk entry

The same definition in bulk: hidden line breaks and non-breaking spaces are cleaned, in-file duplicates flagged and faulty rows returned as an Excel file.

Visual designer

Steps, fields, templates, code masks and conditions without code; live preview, versions and distribution as a .wizlog package.

THE PROBLEM

A bad card spoils every document after it

- The same customer is opened twice under different spellings; balance and risk limit get split.
- Hidden characters in tax IDs and titles pasted from Excel cause trouble in e-invoices and BA/BS reports.
- Code structure, VAT and barcodes vary from person to person; waybills are invoiced one by one at month end.

THE SOLUTION

Your company rules, at the moment of entry

- Step-by-step wizards: tax-ID checksum, e-invoice registration check, code mask, EAN-13 barcode, current VAT rates.
- Duplicate and similar-card warnings stop errors before they reach Logo; in Excel bulk entry every row is cleaned by the same rules.
- Robots turn Excel files dropped into a folder into cards, scan card quality overnight and invoice waybills at month end.

WHY IT IS DIFFERENT

Automation that knows Logo and can be undone

- Deep Logo integration: cities, tax offices, unit sets, sales reps and payment plans are read from Logo; records are written through Logo's own objects and verified afterwards.
- Every action can be undone: preview, dry-run, run log and one-click undo — for cards and invoices alike.
- One rule for people and robots: robots use the same wizard definitions and the same writing channel as people; jobs above a threshold go to LogoSurec for approval.

Frequently asked questions

When does it write to Logo?
The default writing channel is a sandbox that does not touch Logo. Real writing is enabled only for the companies you allow; every record is previewed first, verified after writing and can be undone from the run log.

Do robots run unchecked?
No. Robots dry-run by default and have count and amount limits; jobs above the threshold go for approval. A robot writes with the rights of the Logo user you choose, and every run can be undone.

Can we set up our own card standard?
Yes. In the designer you change steps, fields, templates, code masks and conditions without code; the same definition is used for single entry, Excel bulk entry and robots.

What does it cost?
Packages depend on the wizard, robot and document modules. During early access we prepare a quote for your needs; apply with the form at the bottom of this page.

Product facts

WHO IT IS FOR
Accounting and finance teams, sales and warehouse staff, ERP dealers

ACCESS
Browser interface (desktop and mobile browser); on-premises Windows service

SETUP
Setup wizard, Logo connection

COMPATIBILITY
Logo Tiger (verified on the TIGER3 schema); GO being verified; SQL Server

LICENCE
In beta: ready-made wizards and robots can be tried with the demo account; packages are shared during early access
