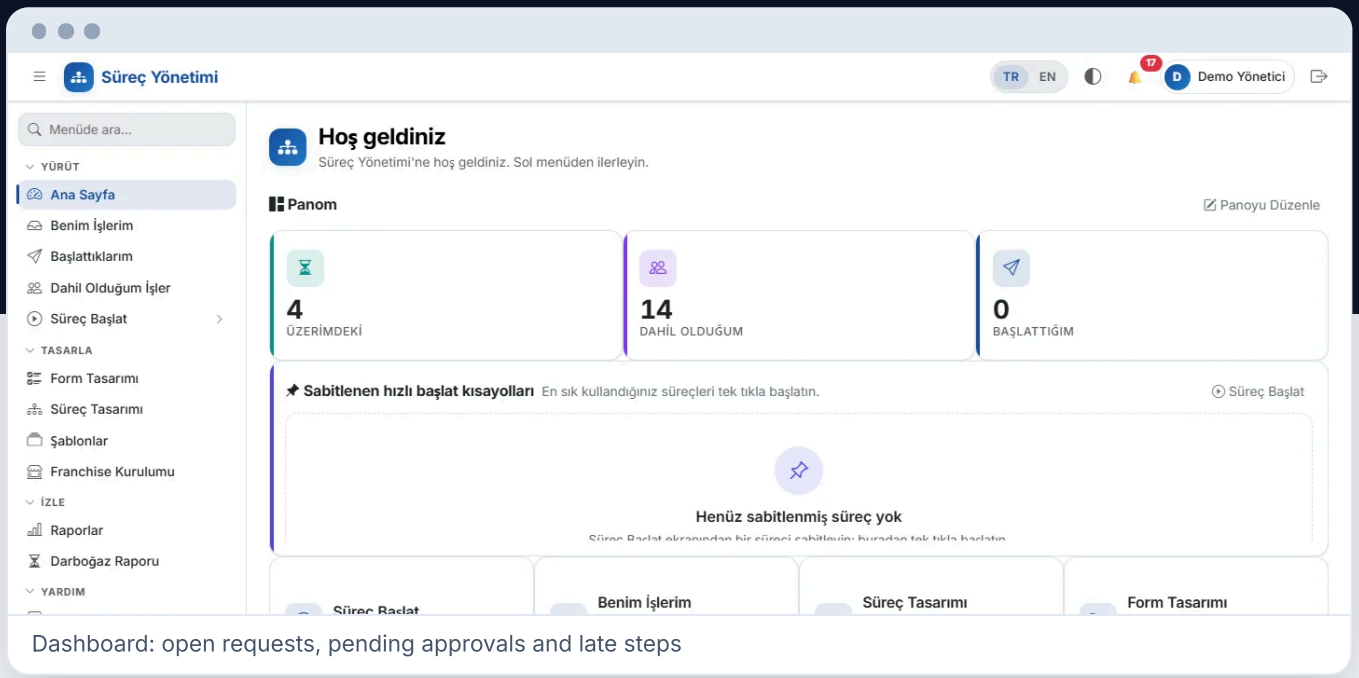
LogoSüreç

LogoSüreç

A workflow tool to design requests, approval chains and forms without code, show who holds each step and pass approved work to Logo.



Dashboard: open requests, pending approvals and late steps

Highlights

Mobile approval and alerts

Approvers get notified and approve from their phone; reminders and escalation on delay.

17 ready-made processes

Purchasing, leave, hiring, travel and advances, expenses, IT support, contract approval and more come with the installation.

Document forms

Invoice and order forms with header, line and footer sections; line formulas, totals and PDF output.

ERP integration

Call REST/SOAP services from a process step and write records to Logo Tiger and Mega with field mapping.

THE PROBLEM

Why do approvals get stuck?

- Requests travel by e-mail and phone; nobody knows who holds them.
- Approval rules vary by person and are not recorded.
- Approved work is re-entered into ERP by hand.

THE SOLUTION

What does LogoSüreç do?

- You design the process with drag and drop: steps, conditions, forms and deadlines.
- The owner and duration of each pending step are visible, and delays trigger reminders.
- Approved work is passed to Logo through the ERP connection.

WHY IT IS DIFFERENT

The difference

- Start on day one with 17 ready-made processes.
- Every step and decision is written to an audit trail.
- No code needed; process owners make changes themselves.

Frequently asked questions

Do I need programming skills to design a process?
No. Forms are built in a drag-and-drop designer and flows on a visual canvas. If you prefer, the same definition can also be edited as JSON in the Code tab.

Can we start with ready-made processes?
Yes. 17 processes — including purchasing, leave, hiring, travel and advances, expenses, IT support and contract approval — come with the installation; copy and adapt them.

Can it write records to Logo ERP?
Yes. The integration step writes records to Logo Tiger (via ERP Bridge) and Mega using a field-mapping wizard; on failure the process moves to an error step instead of silently continuing.

Can we move from e-Flow or Logo Flow?
The purchasing process pack was adapted from Logo Flow definitions, and a framework for migrating e-Flow/Logo Flow data is in place. We agree the scope together at the quote stage.

Product facts

WHO IT IS FOR
Purchasing, finance, human resources and operations teams

ACCESS
Installed on your server or hosted

SETUP
Installation and transfer of ready-made processes by our team

COMPATIBILITY
Integrated with LOGO ERP; also works without an ERP

LICENCE
Based on the number of users
